DETAILED ACTION

Claim Rejections - 35 USC § 103

1. The following is a quotation of 35 U.S.C. 103(a) which forms the basis for all obviousness rejections set forth in this Office action:

(a) A patent may not be obtained though the invention is not identically disclosed or described as set forth in section 102 of this title, if the differences between the subject matter sought to be patented and the prior art are such that the subject matter as a whole would have been obvious at the time the invention was made to a person having ordinary skill in the art to which said subject matter pertains. Patentability shall not be negated by the manner in which the invention was made.

2. Claims 8 and 11 are rejected under 35 U.S.C. 103(a) as being unpatentable over Admitted Prior Art (APA).

Considering claim 8, the claimed (a) deinterlacing the plurality of first display data and the plurality of second display data to generate a plurality of third display data is met by the disclosure in the APA (Fig.5; Para. [0006]-[0009]); (b) arranging the plurality of third display data to make the plurality of third display data correspond to a second resolution; is met by Fig.6 of the APA as well as Para. [0006]-[0009]);, and c) extracting a plurality of fourth display data corresponding to a plurality of second odd fields from the plurality of third display data, and extracting a plurality of fifth display data corresponding to a plurality of second even fields from the plurality of third display data, is met by Fig.7 and Para. [0006]-[0009]);

As to the claimed wherein in step (a), a motion adaptive deinterlace algorithm is applied to generate the plurality of third display data, the APA does not specifically disclose using a motion adaptive deinterlace algorithm. However, the examiner takes official notice in that the claimed "motion adaptive deinterlace algorithm" is notoriously

well known in the art of de-interlacing video images and, therefore, it would have been obvious to the skilled in the art at the time the invention was made to utilize such an algorithm in order to easily detect motion in the image data and process the data accordingly.

Considering claim **11**, the APA discloses using the bi-linear interpolation methods to process the display data. [see 0007].

Allowable Subject Matter

3. Claims **1-7** are allowed.
4. Claims **9** and **10** are objected to as being dependent upon a rejected base claim, but would be allowable if rewritten in independent form including all of the limitations of the base claim and any intervening claims.

Conclusion

5. The prior art made of record and not relied upon is considered pertinent to applicant's disclosure. De Haan, US 6618094 discloses de-interlacing image signals utilizing motion adaptive de-interlacing algorithm.
